PROFESSIONAL SUMMARY

Senior Software Engineer with 5+ years architecting scalable, multi-tenant SaaS platforms in TypeScript, React.js, and Redux Toolkit within Turborepo/pnpm monorepo environments. Specializes in platform-level systems: multi-brand theming architectures, company-wide design systems, and voice-driven AI agent integrations built on WebSocket pipelines and structured Redux action contracts. Proven track record leading 5+ engineer teams, cutting onboarding time by 40%, and delivering measurable performance gains through architectural refactoring. Currently expanding into data engineering with SQL and Python, building a foundation in data pipelines and analytics to complement frontend architecture expertise with end-to-end, data-driven product development.

TECHNICAL SKILLS

- Core: TypeScript (idiomatic), JavaScript (ES6+), React.js, Next.js, HTML5, CSS3
- State & Data: Redux Toolkit (RTK Query), Apollo GraphQL, RESTful API Integration, Axios, WebSockets
- UI & Design Systems: Storybook, Tailwind CSS, Material UI, ANT Design, Styled Components, Bootstrap
- Architecture: Turborepo, pnpm monorepos, multi-tenant/multi-brand theming systems
- Data Engineering (In Progress): SQL, Python, data pipeline fundamentals
- Performance & Debugging: React Profiler, component memoization, bundle optimization, IndexedDB, performance benchmarking
- Testing & Quality: Jest, code review workflows, documentation standards
- Tools & Platforms: Git, GitHub, Azure DevOps, React Native, Node.js, PostgreSQL

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Techversant Infotech Pvt Ltd *Nov 2022 – Present*

- Led a team of 5+ engineers delivering high-performance, scalable web applications built with TypeScript, React.js, and Redux Toolkit across multiple business-critical products.
- Architected EventoV2, a multi-tenant SaaS club event management platform, including a two-axis data-brand/data-theme system with a custom `applyTheme()` boot sequence supporting per-tenant branding at scale.
- Designed a voice-driven AI agent integration for EventoV2, combining a structured Redux action contract with a WebSocket pipeline and monorepo-aware file placement for real-time, conversational app control.
- Boosted application performance by 35% through architectural refactoring, React component memoization, and systematic profiling and benchmarking.
- Architected and shipped a reusable Design System (component library, color tokens, typography standards) documented in Storybook, significantly reducing UI development time and ensuring cross-product consistency.
- Implemented offline-first capabilities using IndexedDB, enhancing reliability and user experience for large-scale event and field applications.
- Established standardized code review practices and documentation, reducing engineer onboarding time by 40%.

Software Engineer | Talrop Pvt Ltd / Steyp Pvt Ltd *Aug 2020 – Oct 2022*

- Developed responsive, accessible UIs for AI-powered business automation products using React.js, TypeScript, and Redux — focusing on clean code architecture and reusability.
- Built and maintained shared component libraries with Redux and TypeScript, improving development efficiency by 25% across teams.
- Integrated RESTful APIs and contributed to complex enterprise frontend systems with a focus on reliability and debuggability.

KEY PROJECTS

EventoV2 — Multi-Tenant SaaS Club Event Management Platform

React.js, TypeScript, Redux Toolkit, RTK Query, WebSockets, Turborepo/pnpm, Tailwind CSS

- Architected a multi-tenant frontend supporting per-club/brand theming via a two-axis data-brand/data-theme system with a runtime `applyTheme()` boot sequence.
- Built the frontend Redux action contract and WebSocket pipeline powering a voice-driven AI agent, enabling real-time conversational control across a monorepo-aware codebase.
- Led frontend estimation aligned to Jira phases and BRD requirement IDs, producing formula-driven estimation workbooks used for sprint and release planning.

HR Automation Platform

React.js, TypeScript, Redux Toolkit, RTK Query, Tailwind CSS, Material UI, Storybook

- Architected a full-featured HR automation platform covering employee lifecycle, leave management, and workflow automation for an enterprise client.
- Designed and implemented a scalable, Storybook-documented Design System with reusable component libraries, typography standards, and color tokens — the platform foundation for all UI teams.

CBG Visualization — Sales & Opportunities Tracking Platform

React.js, Redux Toolkit, RTK Query, Apollo GraphQL, React Charts, Tailwind CSS

- Built an interactive data visualization platform with year-wise, region-wise, and category-wise dashboards enabling real-time drill-down into sales performance metrics.
- Consumed GraphQL and RESTful APIs with RTK Query to manage complex server-state efficiently across the application.

Buteo — Legal Case Management Platform

React.js, Node.js, PostgreSQL, Tailwind CSS, Redux Toolkit, Nextcloud API, Axios

- Built modules for legal matter tracking, contract workflows, and secure document collaboration with role-based access, audit trails, and real-time notifications.

EDUCATION

Bachelor of Computer Application (BCA) 2023 – 2026

Manipal University Jaipur

LANGUAGES

English, Malayalam, Tamil, Hindi
